

Task 1: Category Performance Analysis

Business Need: Management wants to know which product categories generate the highest revenue.

Task: Create a visualization to compare total Sales by Category and identify the top-performing category.

Task 2: Sales Trend Analysis

Business Need: The leadership team wants to understand how sales fluctuate over time to plan promotions and inventory.

Task: Analyze Sales trends over time (monthly) to identify peak and slow periods.

Task 3: Regional Contribution Analysis

Business Need: The regional managers want clarity on how much each region contributes to overall sales.

Task: Visualize Region-wise Sales contribution and identify the highest contributing region.

Task 4: Profitability Investigation

Business Need: The finance team suspects that some high-sales orders may be reducing overall profit.

Task: Analyze the relationship between Sales and Profit to identify loss-making or low-profit orders.

Task 5: Business Growth Evaluation

Business Need:

Senior management wants to assess whether the business is growing consistently.

Task: Visualize cumulative Sales growth over time to evaluate overall performance.

Task 6: Category vs Region Performance

Business Need: Operations wants to know which regions perform well for each product category.

Task: Compare Category-wise Sales across Regions to identify strong and weak market areas.

Task 7: Product Prioritization

Business Need: The product team wants to focus on products that create maximum business impact.

Task: Perform a multi-dimensional analysis using Sales, Profit, and Quantity to identify priority products.

Task 8: Executive Dashboard Creation

Business Need: The CEO wants a single view dashboard that summarizes key insights.

Task: Create an interactive dashboard combining at least three visualizations and apply filters such as Region or Category.

Q9. Chart Selection Justification

Explain why different charts were used for different business questions in this analysis.

Ans: Different charts are used because each business question is trying to reveal a different kind of insight, and no single chart type is good at everything. Choosing the right chart makes patterns easier to understand and prevents misinterpretation.

Each chart aligns with a specific analytical goal:

- **Comparison**
- **Trend**
- **Composition**
- **Relationship**
- **Distribution**

Using the wrong chart can hide insights or even mislead decisions. For example, using a pie chart to show trends over time would make it hard to see changes.

Q10. Business Insight Summary

Summarize two key insights from your dashboard and explain how they can help management make better decisions.

Insight 1: Uneven Sales Performance Across Categories and Regions

The dashboard shows that certain product categories and regions contribute significantly more to total sales than others. A few categories emerge as top revenue drivers, while some regions consistently outperform others.

Business Impact:

- Management can focus on **high-performing categories and regions** to maximize revenue
- Underperforming areas can be analyzed for improvement (pricing, marketing, or supply issues)
- Helps in **better allocation of budget and resources**

Insight 2: High Sales Do Not Always Lead to High Profit

The Sales vs Profit analysis reveals that some high-sales orders generate low or even negative profit, indicating inefficiencies such as heavy discounts or high operational costs.

Business Impact:

- Management can identify and reduce **loss-making products or transactions**
- Improve pricing strategies and control discount policies
- Shift focus from just increasing sales to **improving overall profitability**

Conclusion

These insights help management make **data-driven decisions** by focusing on both **revenue growth and profit optimization**, ensuring sustainable business performance.
