

Q1. explain the different between a tableau and a tableau story point give two healthcare related use cases?

Ans:

Feature	Tableau Dashboard	Tableau Story Point
Purpose	Displays multiple visualizations together in one interactive screen	Presents insights in a sequence like a presentation
Focus	Monitoring and exploration	Storytelling and guided analysis
User Interaction	Users freely filter and explore data	Users follow a logical flow of insights
Structure	Single page with charts, KPIs, filters, maps	Collection of sheets/dashboards arranged step-by-step
Best For	Operational monitoring	Executive presentations and decision-making
Example	Hospital performance monitoring dashboard	Patient treatment journey analysis story

Q2. what are actions in tableau? explain how filter action can help Hospital management analyze patient data?

Ans:

Action Type	Purpose
Filter Action	Filters data in another chart/dashboard
Highlight Action	Highlights related data points
URL Action	Opens webpages or external systems
Parameter Action	Changes parameter values dynamically
Set Action	Lets users interact with sets dynamically

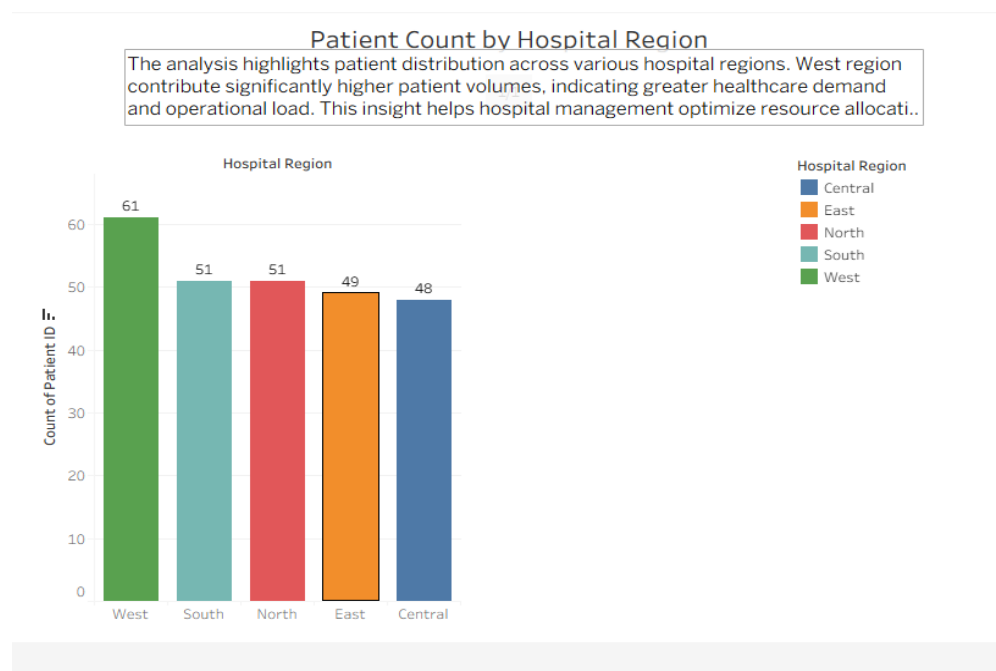

A **Filter Action** allows users to click or hover on one visualization and automatically filter another visualization.

It creates interactive analysis between charts.

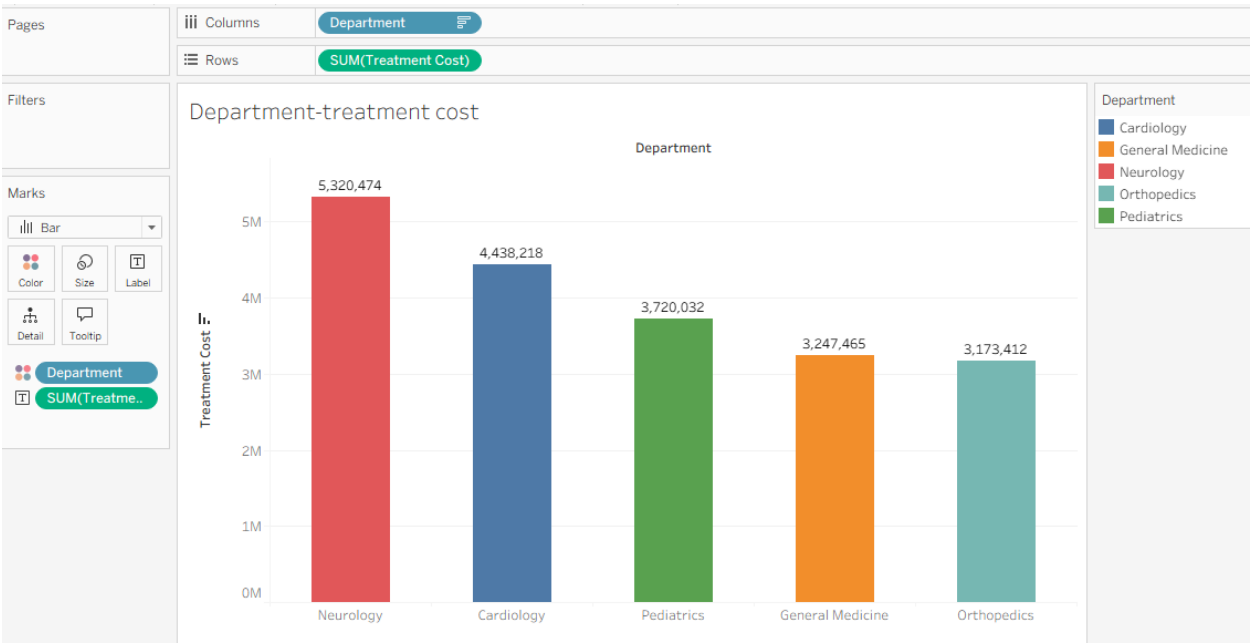

Filter actions help management:

- Drill down into specific departments
- Analyze patient groups quickly
- Identify operational issues
- Improve decision-making
- Recovery rates
- Regional costs
- Emergency patient costs
- Emergency outcomes
- Emergency stay duration
- Diabetes treatment methods
- Recovery rates
- Avg treatment cost
- Avg length of stay
- Age Group Chart
- Gender Distribution

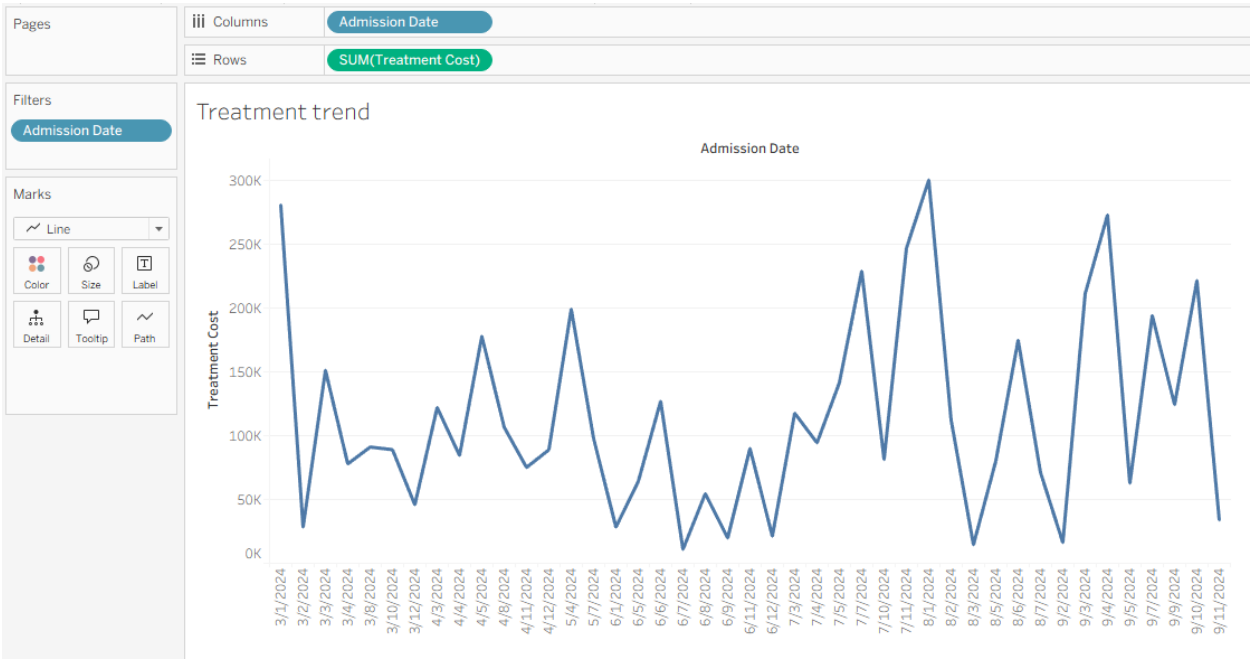

Q3. Patient distribution: Create bar chart 1) Total patient by Hospital Region 2) Add this as a story point with proper title?

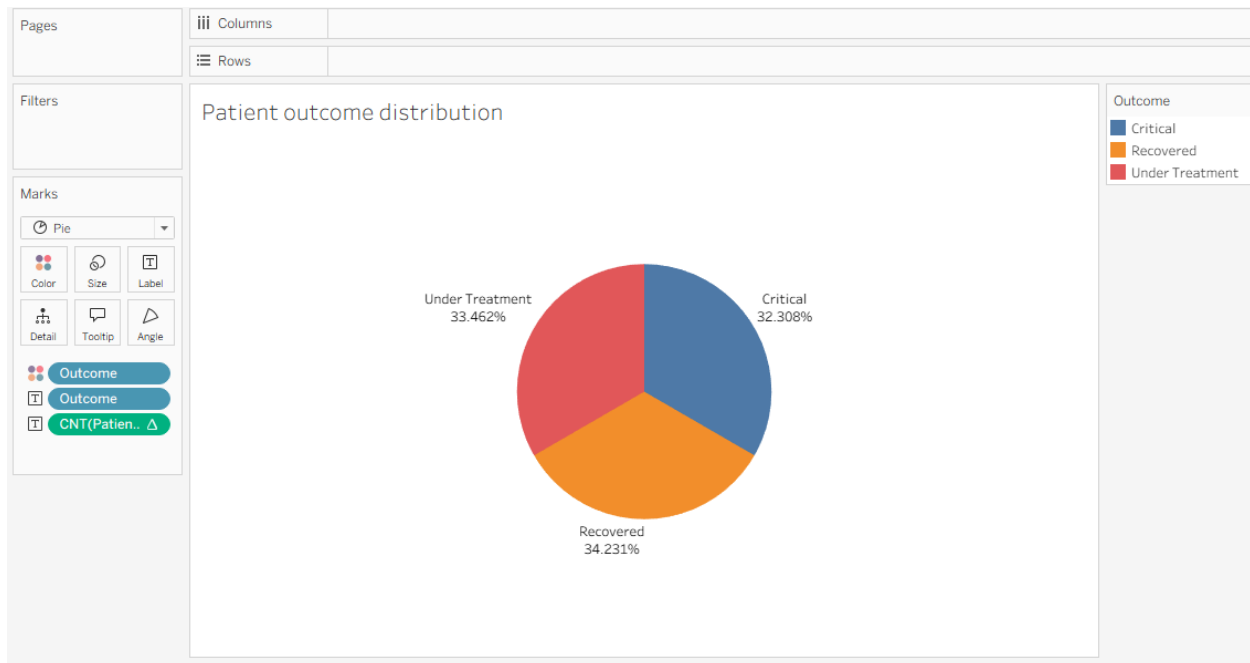

Q4. Department performance: create visualization showing 1) Treatment cost by Department 2) Add labels & customize colour.

Q5. Treatment trend over time: Create line chart 1) Treatment cost vs Admission date 2) filter data only march to sep.

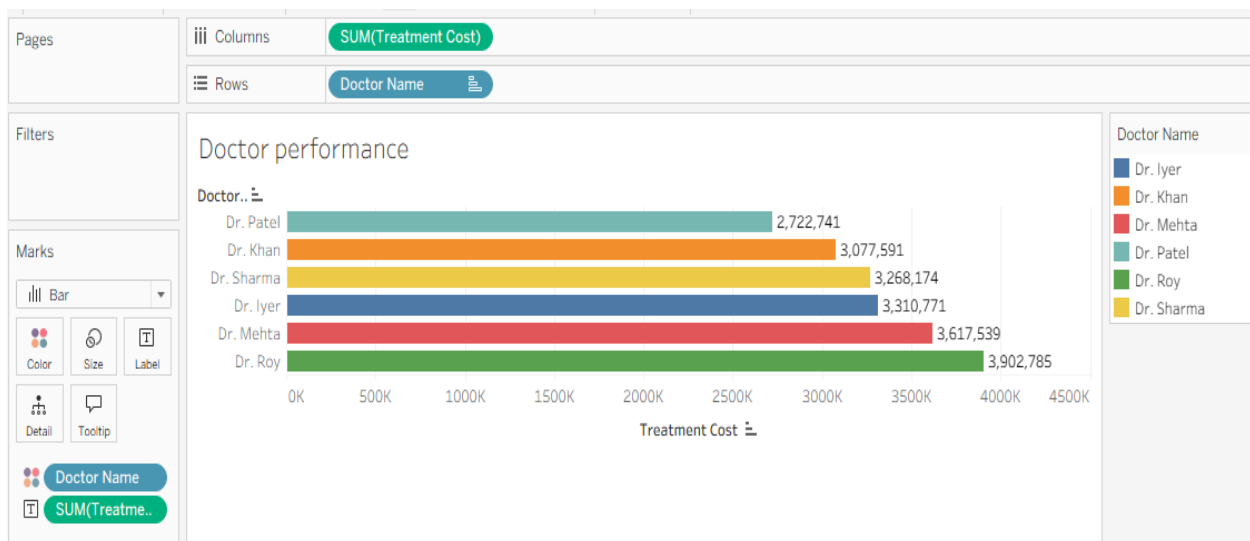

Q6.Outcome analysis: Create pia chart , Patient outcome distribution(recovered,critical,under treatment)

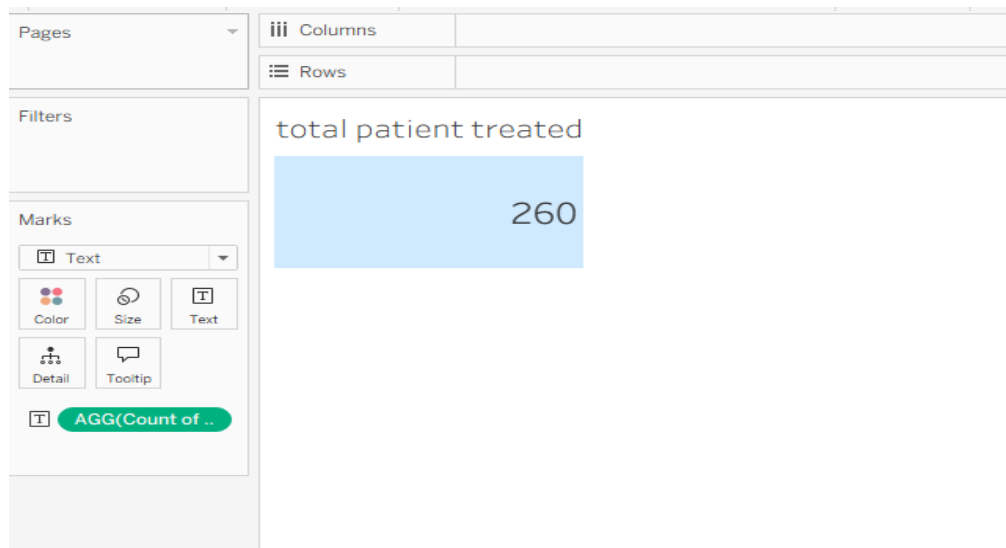

Q7.Doctor performance & Patient KPI Analysis :

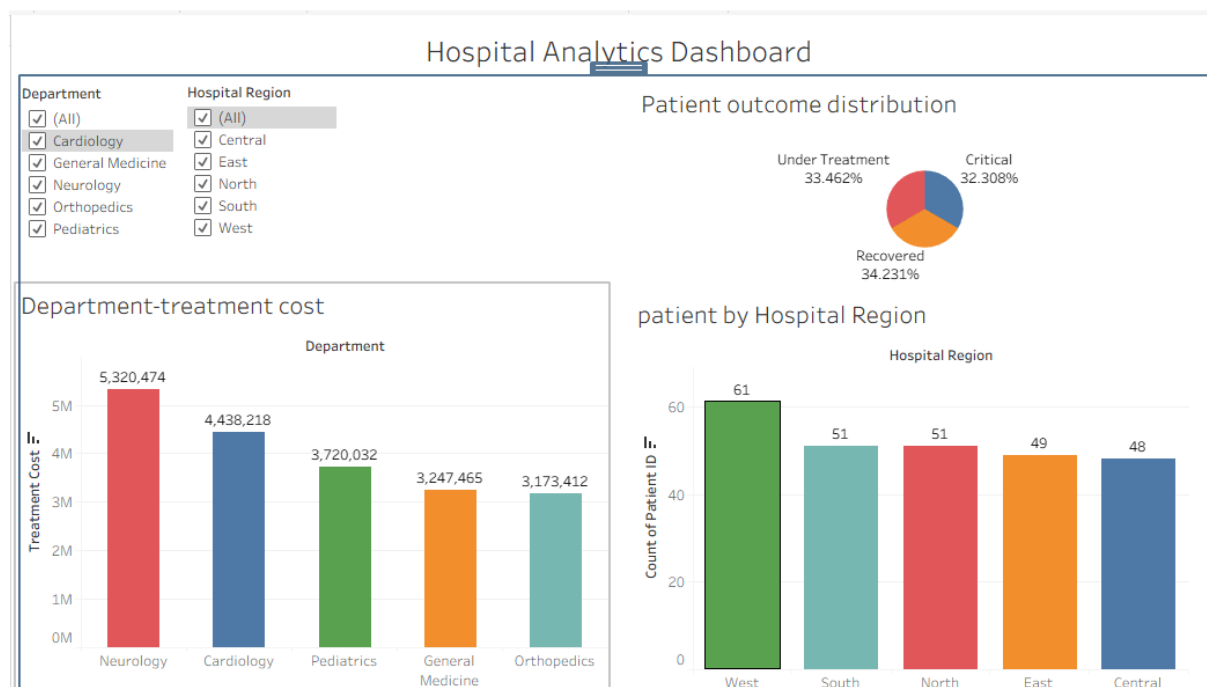

Part A : Doctor performance, create a ranked Bar chart showing, top doctor by total treatment cost handled.

Part B : KPI Creation, create KPI Visualization showing total patient treated .

Q8. Interactive dashboard, build dashboard containing region chart, department cost chart, outcome chart, along with filter Hospital region & department.

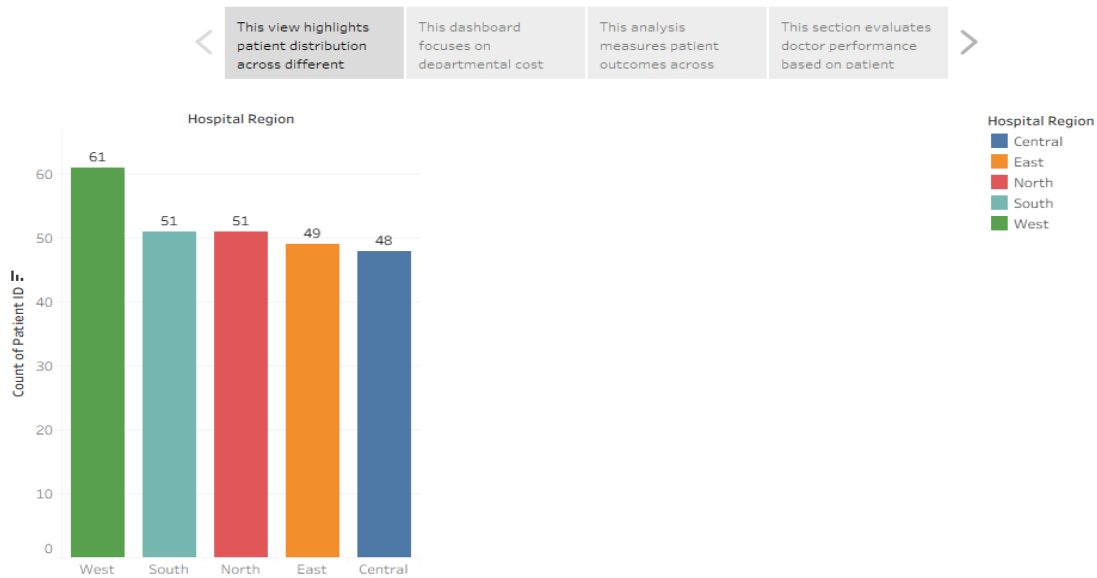

Q9. Storytelling flow: Create Tableau story with minimum 4 story points:

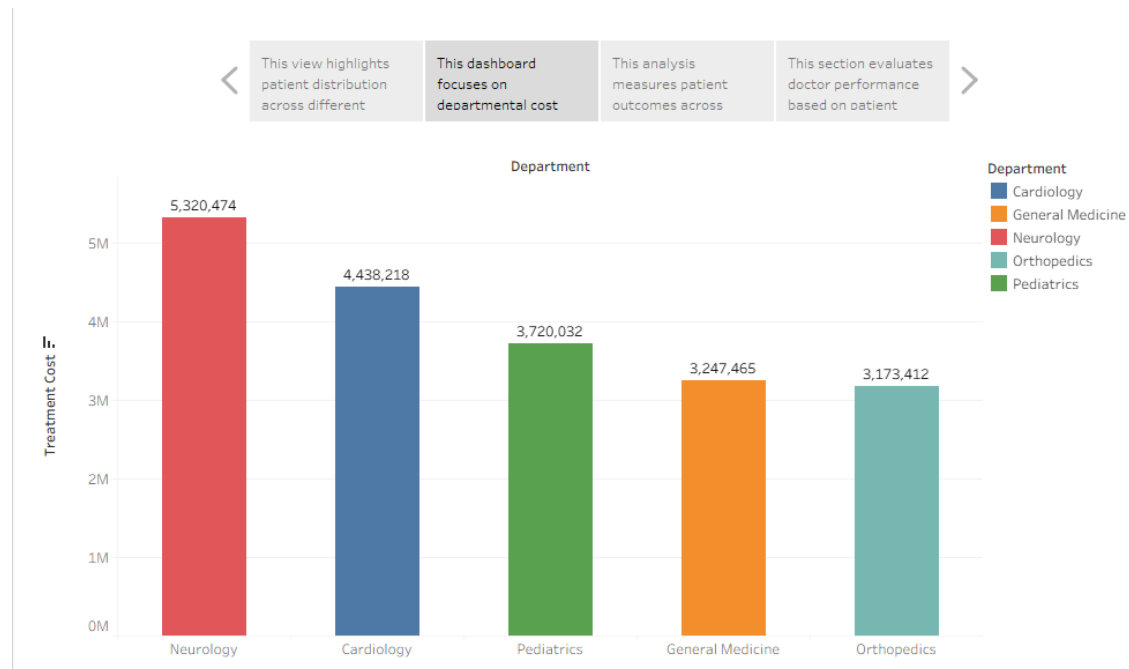

1.patient distribution 2. Department cost analysis 3. Outcome Analysis 4. Doctor performance.

Ans: [Hospital Management.twbx](#)

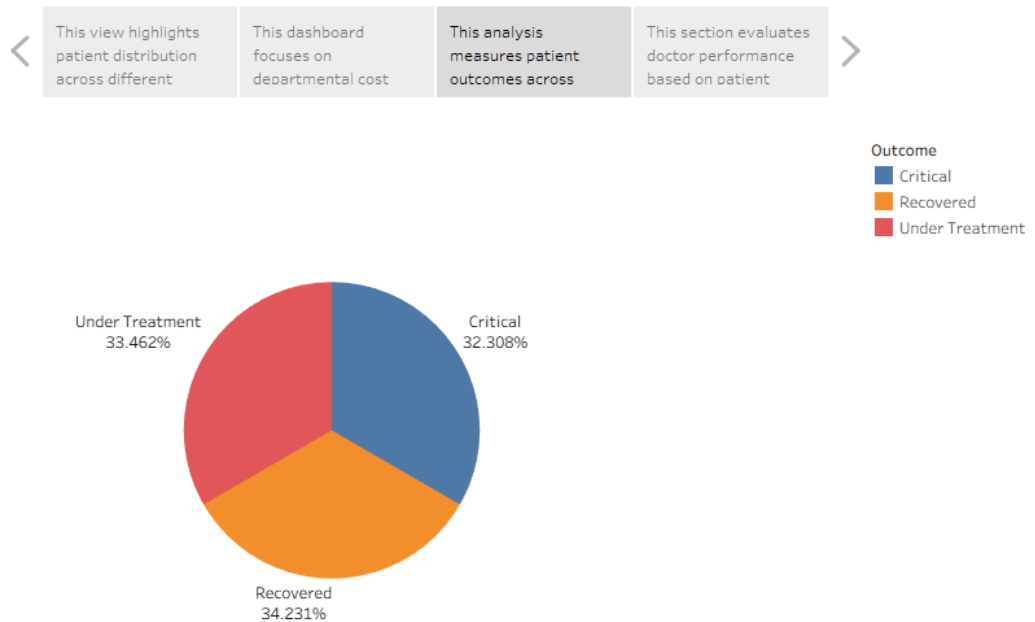

1.patient distribution

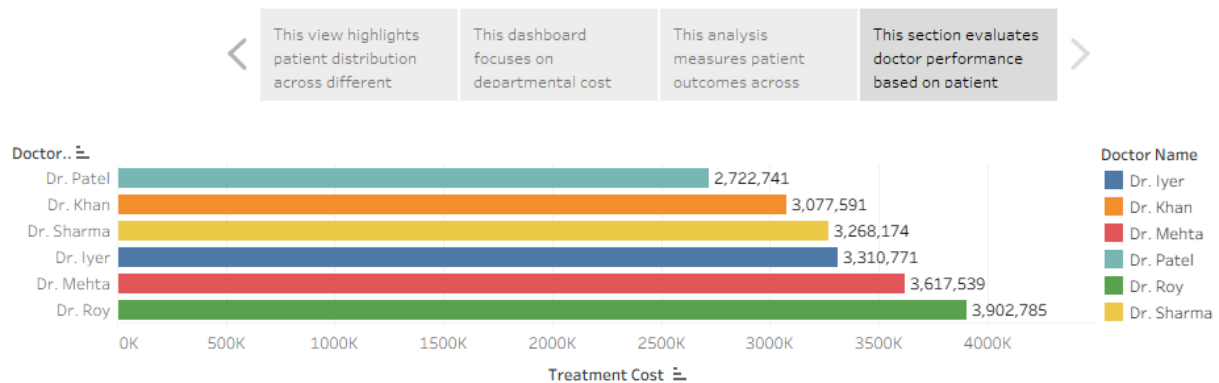

2. Department cost analysis

3. Outcome Analysis

4. Doctor performance

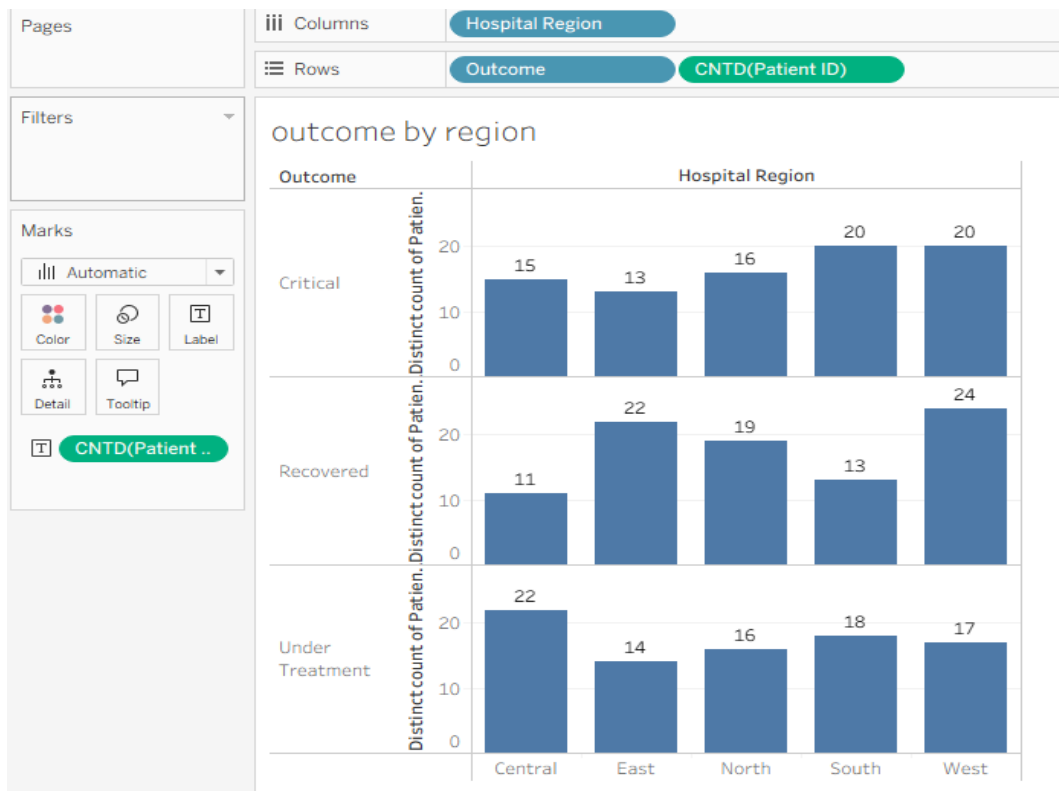

Q10. based on your visuals, answer:

1) which department generate the highest treatment cost?

Ans: Neurology department is the highest cost generation department.

2) Which region has most critical patient?

Ans: South & West region has most critical patient

3) What business decisions can hospital management take from this insight?

Ans: The dashboard helps hospital management make data-driven decisions related to resource allocation, cost optimization, patient outcome improvement, doctor performance evaluation, and strategic healthcare planning across regions and departments.
